=====

DEMO SYNTHETIC DRILLING DATA - OIL INDIA LIMITED HACKATHON PROTOTYPE

=====

Well Name: DEMO-W002 (Offset North-East)

Field: Dikom / Greater Dibrugarh Area

Date: 2024-04-02 | Report Number: DDR-58 | Rig: Synthetic-Rig-02

Depth: 3615.0 m (MD) | Formation: Kopili Formation

OPERATIONAL SUMMARY & INCIDENT DETAILS:

Event: STUCK_PIPE (Differential Sticking Incident)

Severity: HIGH

Observed Symptoms: Overpull observed on connections exceeding 85 klbs; inability to rotate drillstring.

Cause: Reactive swelling shale combined with high differential pressure across depleted Kopili sand string

Impact: 14.5 hours of Non-Productive Time (NPT) spent jarring and circulating pipe-freeing pill.

Mitigation: Spotted 35 bbl hydrocarbon/glycol freeing pill; worked drillstring with hydraulic jar (maximum

Lesson Learned: Maintain strict mud inhibition and limit stationary connection times to under 3 minutes.

DRILLING PARAMETERS AT TIME OF INCIDENT:

WOB: 26.0 klbs | RPM: 95 | Torque: 19.5 kft-lbs | Mud Weight: 1.32 SG | ECD: 1.39 SG

Flow Rate: 480 gpm | Standpipe Pressure: 3100 psi | ROP: 6.8 m/hr
