

WELL COMPLETION REPORT - DEMO WELL W003

=====

DEMO SYNTHETIC DRILLING DATA - OIL INDIA LIMITED HACKATHON PROTOTYPE

=====

Well Name: DEMO-W003 (Offset West)
Field: Dikom / Greater Dibrugarh Area
Date: 2024-05-18 | Final Well Summary Report | Rig: Synthetic-Rig-03
Depth: 3850.0 m (TD) | Target Horizon: Sylhet Limestone

SECTION SUMMARY & CRITICAL WELL CONTROL EVENT:

Event: KICK (Gas Influx / Well Control Event)

Severity: CRITICAL

Observed Symptoms: Rapid pit gain (+32 bbls in 6 minutes), flow check positive with pumps off, shut-in dri

Cause: Unexpected high pressure gas stringer encountered at 3842 m in Sylhet Limestone top.

Impact: Shut in well using annular preventer; 18 hours well control operation to circulate out kick.

Mitigation: Executed Engineer's Method to kill well. Weighted mud from 1.35 SG to 1.44 SG using barite.

Lesson Learned: Conduct regular slow pump rate (SCR) measurements and keep kill sheet continuously updated

POST-WELL RECOMMENDATIONS:

Prior to drilling Sylhet Limestone in adjacent blocks, ensure pilot hole or MWD resistivity real-time corr
